

TRAINING PROGRAMM

The World of Diving Instructor World Association

 In our level one basic program, underwater photography is explained from the bottom up. Starting with the camera and its functions, basic physics will be discussed in order to lead to a better understanding for the art of photography. The subject of light and flash will be covered in the course, as well as the topic of ethical handling of the underwater world. The ideal course for beginners!

 In our DIWA level two advanced program, the underwater photographers are introduced to the techniques of different types of photography such as wide angle or macro split shot. Light and flash technology will be explained in detail and the artistic abilities of the photographers will be awakened. An important topic in this course is the image structure and the possibilities with the respective camera system. Also image editing is an essential part of the advanced program. The ideal course for all ambitious photographers that completed the basic program!

 In our DIWA special courses the knowledge level can be further deepened! Special courses such as: macro special, wide angle special, digital image editing, model photography, light master, or underwater video are available. Upon completion of two special courses, the underwater photographer has achieved a very high level of knowledge of underwater photography and receives the excellent **Brevet Master Level**

Everything is possible with the new DIWA course program underwater photography

Passion photography
 Images for eternity

DIWA courses in underwater photography
 If you want to learn how to take professional photos underwater, you can attend a course in this art offered by most of the DIWA diving schools.

In addition to the theory of photography taught in class, most DIWA courses include at least one accompanied dive or pool session to practice underwater photography.

A course usually covers everything from basic photographic knowledge to the correct method of applying it underwater.

Photography is a passion that requires an eye. An eye for special moments, for aesthetics, for the beauty of nature, and for a unique atmosphere. If you have your camera with you and you push the button at the right moment, you can capture magical, natural spectacles to hold on forever. Photography brings your memories to paper. They are always at hand and evoke the emotions you felt at the moment of taking the picture. Photography is magical!
